

Brandzp Analytics — System Features

Multi-tenant SaaS growth command center for Shopify brands

Repo: shopify-profit-ops-system · First tenant: Incense Parfums · Generated: August 4, 2026

The system syncs a store's commerce and marketing data (Shopify, Meta Ads, Instagram, Google Search Console) into its own Postgres database and turns it into profit analytics, a proactive weekly growth report, an affiliate program with real attribution, a marketing calendar that generates the team's monthly brief, and an AI growth agent that surfaces red flags and prescribes actions.

Analytics & Profit

- **Main dashboard** — revenue, orders, and refunds at a glance
- **Profit & contribution-margin analysis** — accounts for product costs, discounts, refunds, and ad spend, with product cost management
- **Sales summary** views across periods
- **Retention analytics** — repeat-purchase behavior
- **Portfolio view** across products
- **Offline-sales Excel import** — blends non-Shopify revenue into analytics, with a dedicated import status page

Weekly Growth Report

FLAGSHIP

- **Weekly PDF report** rendered from a single print page — BI commentary, red-flag surfacing, and prescribed actions
- **Email delivery** (Resend) and a full report history archive
- **Meta Ads weekly print report** and a **daily summary** print page
- **Closed-loop decision ledger** — every resolved alert's outcome is measured 3–7 days later and reported back ("✅ X worked / ❌ Y didn't")

Affiliate Portal

8 TABS

- **Affiliate directory** — add / import / export affiliates with Instagram profiles, plus per-affiliate detail pages
- **Coupon creation directly in Shopify** — single and bulk, scoped to products / collections / segments, with apply-links
- **Three-way attribution** reconciled into one ledger: ?ref link tracking (storefront script → cart attributes → order webhook), coupon-code matching, and BixGrow / CSV imports of historical conversions
- **Conversions ledger** with real order linkage
- **Payouts workflow** — approve → mark paid, with per-status balances
- **Commission engine** — per-affiliate override → program rate → 10% default; 2-hour create-only backfill and orphan reconciler catch anything the webhook missed
- **Programs, settings, and content tabs**

Marketing Planner — Gantt Studio

- **Excel marketing-calendar upload** — Israeli calendar-matrix or tabular formats, Hebrew + English; parser classifies every task (discount, banner, video, post, email, SMS, web)
- **Monthly marketing brief generation** in the team's exact format — Hebrew RTL PDF, per-role PDFs, and a customer-service discount sheet
- **Discount audit on every brief** — flags duplicate coupon codes, collisions with existing affiliate codes, and mechanics that need special setup on a non-Plus Shopify plan, with per-offer guidance

Growth Agent & Alerts

- **Configurable AI agent** — thresholds, comparison windows, guardrails, and approval rules
- **Action center and alerts feed** — findings surface as actionable alerts
- **Run history** and data-source **connections** management
- **Supplier-orders tracking** and **product follow-ups**

Creative Studio

- **AI image generation** (Replicate / Flux) organized into projects, with local / S3 / R2 storage
- **Image and video asset editing** within projects
- **Creative sprints** — brief-driven batch generation
- **Creator flow** for guided asset production

Data Sync & Integrations

- **Shopify connection** — OAuth Partner app or pasted Admin token with scope validation; HMAC-verified order webhooks
- **2-hour sync cron** — Shopify → Meta Ads → Instagram → Google Search Console per store, plus affiliate reconcile + backfill; manual sync available
- **Brandzp BI Gateway** — internal LLM router for briefs and commentary, with Anthropic as fallback

Platform & Multi-Tenancy

- **Authentication** — signup / signin, password reset, organization invites (Supabase Auth)
- **Multi-tenant organizations** — org-scoped store switcher and route guards on every surface
- **Onboarding** — welcome wizard, connect-brand flow, and setup-health checks
- **Settings** — account, organization, audit log, and general app settings
- **Billing** — trial-expired paywall with Stripe scaffolding
- **Security, privacy, and terms** pages; notification service
- **Hebrew / RTL support** throughout, including a Hebrew comparison page
